**embryo development gizmo:** The System of Objects Jean Baudrillard, 2020-04-07 The System of Objects is a tour de force—a theoretical letter-in-a-bottle tossed into the ocean in 1968, which brilliantly communicates to us all the live ideas of the day. Pressing Freudian and Saussurean categories into the service of a basically Marxist perspective, The System of Objects offers a cultural critique of the commodity in consumer society. Baudrillard classifies the everyday objects of the “new technical order” as functional, nonfunctional and metafunctional. He contrasts “modern” and “traditional” functional objects, subjecting home furnishing and interior design to a celebrated semiological analysis. His treatment of nonfunctional or “marginal” objects focuses on antiques and the psychology of collecting, while the metafunctional category extends to the useless, the aberrant and even the “schizofunctional.” Finally, Baudrillard deals at length with the implications of credit and advertising for the commodification of everyday life. The System of Objects is a tour de force of the materialist semiotics of the early Baudrillard, who emerges in retrospect as something of a lightning rod for all the live ideas of the day: Bataille’s political economy of “expenditure” and Mauss’s theory of the gift; Reisman’s lonely crowd and the “technological society” of Jacques Ellul; the structuralism of Roland Barthes in The System of Fashion; Henri Lefebvre’s work on the social construction of space; and last, but not least, Guy Debord’s situationist critique of the spectacle.

**embryo development gizmo:** Information Arts Stephen Wilson, 2003-02-28 An introduction to the work and ideas of artists who use—and even influence—science and technology. A new breed of contemporary artist engages science and technology—not just to adopt the vocabulary and gizmos, but to explore and comment on the content, agendas, and possibilities. Indeed, proposes Stephen Wilson, the role of the artist is not only to interpret and to spread scientific knowledge, but to be an active partner in determining the direction of research. Years ago, C. P. Snow wrote about the two cultures of science and the humanities; these developments may finally help to change the outlook of those who view science and technology as separate from the general culture. In this rich compendium, Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics, the physical sciences, biology, kinetics, telecommunications, and experimental digital systems such as artificial intelligence and ubiquitous computing. In addition to visual documentation and statements by the artists, Wilson examines relevant art-theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future. He also provides lists of resources including organizations, publications, conferences, museums, research centers, and Web sites.

**embryo development gizmo:** Human Embryonic Stem Cells Arlene Chiu, Mahendra S. Rao, 2003-08 A discussion of all the key issues in the use of human pluripotent stem cells for treating degenerative diseases or for replacing tissues lost from trauma. On the practical side, the topics range from the problems of deriving human embryonic stem cells and driving their differentiation along specific lineages, regulating their development into mature cells, and bringing stem cell therapy to clinical trials. Regulatory issues are addressed in discussions of the ethical debate surrounding the derivation of human embryonic stem cells and the current policies governing their use in the United States and abroad, including the rules and conditions regulating federal funding and questions of intellectual property.

**embryo development gizmo:** Sex Chromosomes and Sex-Linked Genes Susumu Ohno, 2013-06-29 Natural selection operates among individual organisms which differ in their genetic constitution. The degree of hereditary variability within a species is greatly enhanced by cross-fertilization. Indeed, the mechanism of sexual reproduction occurred very early in evolution, for it is seen today even in bacteria. In *Escherichia coli*, fertilization occurs by passage of the single chromosome from the male into the female bacterium (LEDERBERG, 1959). In multicellular

organisms, the separation of germ from soma, and the production of haploid gametes became mandatory. The gametes were of two types. One, extremely mobile, was designed to seek out and penetrate the other, which loaded with nutrients, received the mobile gamete and initiated the development of a new individual. The foundation for true bisexuality was thus laid. In the primitive state of bisexuality, whether an individual is to be a sperm-producing male or an egg-producing female appears to be decided rather haphazardly. In the worm, *Banelia viridis*, the minute males are parasites in the female. Larvae that become attached to the proboscis of an adult female become males, while unattached larvae sink to the bottom and become females (BALTZER, 1935). The more sophisticated state of bisexuality was initiated by setting aside a particular pair of chromosomes for specialization and making either the male or the female a heterogametic sex. Sex chromosomes as we know them were thus born.

**embryo development gizmo: Processed Lives** Melodie Calvert, Jennifer Terry, 2005-06-28  
Considers how the terms of gender are embodied in technologies, and conversely, how technologies shape our notions of gender. The contributors explore the complex territory between the lust for, and the fear of, technology, commenting on the ambivalence women experience in relation to machines. Discussing topics such as embryonic fertilization, the virtual female, networking women, the sexuality of computers, surveillance systems, UFOs, and the emancipation of Barbie, Processed Lives offers a provocative, visually rich critical approach to the multifaceted relationships between masculinity, femininity and machines. Contributors: Barbie Liberation Organization, Ericka Beckman, Lisa Cartwright, Gregg Bordowitz, Sara Diamond, Judith Halberstam, Evelyn Hammonds, Kathy High, David Horn, Ira Livingston, Bonita Makuch, Margaret Morse, Soheir Morsy, Liss Platt, Ruby Rich, Connie Samaras, Joya Saunders, Julia Scher, Andrea Slane, Mary Ellen Strom, Christine Tamblyn, Nina Wakeford.

**embryo development gizmo: Reptilian Incubation** Denis Charles Deeming, 2004-01-01  
Reptiles have been a topic for scientific study for many decades and remain widely studied around the world. In particular, their reproductive patterns and strategies have been extensively studied, proving useful in analysis of life-history strategies. A pivotal aspect of reptilian reproduction is incubation of eggs. Oviparity is found in all turtles, crocodilians and the tuatara and is prevalent in many lizards and snakes. Many aspects of the eggs, embryos and incubation conditions have been the subject of numerous scientific reports. This volume is dedicated to systematic analysis of reptilian incubation. The concept for the book is to look at reptilian eggs, development and incubation conditions in a functional way with particular emphasis on the natural incubation environment and, rather than concentrating on family accounts, (e.g. incubation in crocodilians) the chapters review the topics in all reptile types allowing for the first time a systematic comparison of incubation between crocodilians, turtles and squamates. In addition to reviewing current information, the authors briefly look towards the future and outline areas where further research is needed.

**embryo development gizmo: Cloud Atlas (20th Anniversary Edition)** David Mitchell, 2010-07-16 #1 INTERNATIONAL BESTSELLER • A timeless, structure-bending classic that explores how actions of individual lives impact the past, present and future—from a postmodern visionary and one of the leading voices in fiction Featuring a new afterword by David Mitchell and a new introduction by Gabrielle Zevin, author of *Tomorrow, and Tomorrow, and Tomorrow* One of the New York Times's 100 Best Books of the 21st Century • Shortlisted for the International Booker Prize *Cloud Atlas* begins in 1850 with Adam Ewing, an American notary voyaging from the Chatham Isles to his home in California. Ewing is befriended by a physician, Dr. Goose, who begins to treat him for a rare species of brain parasite. The novel careens, with dazzling virtuosity, to Belgium in 1931, to the West Coast in the 1970s, to an inglorious present-day England, to a Korean superstate of the near future where neocapitalism has run amok, and, finally, to a postapocalyptic Iron Age Hawaii in the last days of history. But the story doesn't end even there. The novel boomerangs back through centuries and space, returning by the same route, in reverse, to its starting point. Along the way, David Mitchell reveals how his disparate characters connect, how their fates intertwine, and how

their souls drift across time like clouds across the sky. As wild as a video game, as mysterious as a Zen koan, *Cloud Atlas* is an unforgettable tour de force that, like its incomparable author, has transcended its cult classic status to become a worldwide phenomenon.

In this revised second edition, Edoardo Ongaro offers an accessible guide for improving public administration, exploring connections between basic ontological and epistemological stances and public governance, while offering insights for researching and teaching philosophy for public administration in university programmes.

**embryo development gizmo: The Democratization of Artificial Intelligence** Andreas Sudmann, 2019-10-31 After a long time of neglect, Artificial Intelligence is once again at the center of most of our political, economic, and socio-cultural debates. Recent advances in the field of Artificial Neural Networks have led to a renaissance of dystopian and utopian speculations on an AI-rendered future. Algorithmic technologies are deployed for identifying potential terrorists through vast surveillance networks, for producing sentencing guidelines and recidivism risk profiles in criminal justice systems, for demographic and psychographic targeting of bodies for advertising or propaganda, and more generally for automating the analysis of language, text, and images. Against this background, the aim of this book is to discuss the heterogeneous conditions, implications, and effects of modern AI and Internet technologies in terms of their political dimension: What does it mean to critically investigate efforts of net politics in the age of machine learning algorithms?

**embryo development gizmo: Why Zebras Don't Get Ulcers** Robert M. Sapolsky, 2004-09-15 Renowned primatologist Robert Sapolsky offers a completely revised and updated edition of his most popular work, with over 225,000 copies in print. Now in a third edition, Robert M. Sapolsky's acclaimed and successful *Why Zebras Don't Get Ulcers* features new chapters on how stress affects sleep and addiction, as well as new insights into anxiety and personality disorder and the impact of spirituality on managing stress. As Sapolsky explains, most of us do not lie awake at night worrying about whether we have leprosy or malaria. Instead, the diseases we fear—and the ones that plague us now—are illnesses brought on by the slow accumulation of damage, such as heart disease and cancer. When we worry or experience stress, our body turns on the same physiological responses that an animal's does, but we do not resolve conflict in the same way—through fighting or fleeing. Over time, this activation of a stress response makes us literally sick. Combining cutting-edge research with a healthy dose of good humor and practical advice, *Why Zebras Don't Get Ulcers* explains how prolonged stress causes or intensifies a range of physical and mental afflictions, including depression, ulcers, colitis, heart disease, and more. It also provides essential guidance to controlling our stress responses. This new edition promises to be the most comprehensive and engaging one yet.

**embryo development gizmo:** *Bad Judgment* Sidney Bell, 2016-09-19 A man's quest for vengeance is upended when he gets irresistibly close to the enemy's bodyguard in this tense M/M romantic thriller. Embry Ford was a quiet, ordinary guy—until tragedy ripped his life apart. Now he's living under the radar, desperate to hide his identity and determined to learn the truth behind what happened. Even if that means working for—and bedding—a man he loathes. As a bodyguard to a shadowy arms dealer, Brogan Smith knows distractions can kill as easily as a bullet. But when he sets his eyes on his client's sexy assistant, he can't get him out of his mind. Even more unnerving: the closer he gets to Embry, the more Brogan starts to suspect he might be protecting the wrong man. Embry was sure nothing but vengeance would satisfy him—until Brogan offers him something far more tempting. Now Embry must choose: punish the people who nearly destroyed him or fight

for a future with the man who has become his entire world.

**embryo development gizmo: The Future of Technology** Tom Standage, 2005-08-01 From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from *The Economist* examines how far technology has come and where it is heading. Part one looks at topics such as the "greying" (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the "digital Swiss Army knife"; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

practical guide to understanding the way, the mind, and the heart of a boy. A boy's endless imagination, hunger for adventure, and passionate spirit are matched only by his deep desire to be affirmed, esteemed, and loved. Yet over the past few decades, our culture has adopted a model of parenting and educating children that doesn't affirm, celebrate, nurture, or embrace a boy's wildness but rather seeks to tame it. As a result, many moms and dads find themselves frustrated, confused, and wearied by their sons' behavior. The truth is, boys don't need to be tamed—they need to be understood, loved, challenged, and encouraged. Based on clinical research and filled with practical tips and suggestions, therapists Stephen James and David Thomas give fresh insight and much-needed encouragement on the road to raising boys by talking about: Parenting the different stages in a boy's life Healthy discipline and correction Sitting still and paying attention Hot topics like screen time and dating Wild Things helps Christian parents, teachers, mentors, and coaches understand and explore the hearts, minds, and ways of boys and the vital role parents and caregivers play on the journey to authentic manhood.

**embryo development gizmo: Blood in the Machine** Brian Merchant, 2023-09-26 The most important book to read about the AI boom (Wired): The gripping (New Yorker) true story of the first time machines came for human jobs—and how the Luddite uprising explains the power, threat, and toll of big tech and AI today Named one of the best books of the year by The New Yorker, Wired, and the Financial Times • A Next Big Idea Book Club Must-Read The most urgent story in modern tech begins not in Silicon Valley but two hundred years ago in rural England, when workers known as the Luddites rose up rather than starve at the hands of factory owners who were using automated machines to erase their livelihoods. The Luddites organized guerrilla raids to smash those machines—on punishment of death—and won the support of Lord Byron, enraged the Prince Regent, and inspired the birth of science fiction. This all-but-forgotten class struggle brought nineteenth-century England to its knees. Today, technology imperils millions of jobs, robots are crowding factory floors, and artificial intelligence will soon pervade every aspect of our economy. How will this change the way we live? And what can we do about it? The answers lie in *Blood in the Machine*. Brian Merchant intertwines a lucid examination of our current age with the story of the Luddites, showing how automation changed our world—and is shaping our future.

**embryo development gizmo: Stress R Us** Greeley Miklashek, 2018-04-20 This book is a compilation of what a neuropsychiatrist learned about the causes and cures of human diseases in his 41 year medical practice. I treated 25,000 of my fellows and wrote 1,000,000 Rx in the process. The book is divided into 51 Topics (chapters) and contains over 100 references. It serves as an historical review of the field of stress research as well as animal crowding research, as the two morphed together in my theory of population density stress. Human overpopulation is a fact, as we have far exceeded the earth's carrying capacity for our species and mother nature is attempting to cull our numbers through our multitude of diseases of civilization. Our hunter-gatherer contemporaries, living in their traditional manner in their clan social groups widely distributed in their ecosystem, have none of our diseases. As our extreme gene based altruism has brought us tremendous compassion and technological advances in caring for the diseases of our fellows, it has also brought us tremendous overpopulation and brought us near to ecological collapse. We must face our need to restrict our reproduction or mother nature will do it for us. A case in point: infertility in America has increased 100% in just 34 years, from 1982 to 2016. During the same period, our sperm counts have fallen 60%. No-one is willing to look at the obvious cause: neuro-endocrine inhibition of human

reproduction resulting from population density stress. If any of this touches a nerve, please find the time in your busy, stressful day to stop for an hour and read this ground-breaking book. You may never have heard any of this information from any of your healthcare providers or the mass media. Big Pharma rules the minds of your healthcare providers and the mass media. At the end of my career as a practicing psychiatrist, I had become little more than a prescription writing machine and was actually instructed to stop wasting time talking to your patients and just write their prescriptions. So, I retired and spent the next 5 years writing this book. I hope you find it as illuminating as I did doing the research on our epidemic of stress diseases. No wonder that we are ever more anxious and depressed, in spite of taking our 4,300,000,000 Rx every year! The real cure for our diseases of civilization must be a worldwide reduction in family size and a concerted effort to increase the opportunities for women to access education and work, as well as birth control. The alternative is increasing human disease and infertility from population density stress. Please read this book and tell me if you don't agree with my surprising conclusions. Good luck and God bless us one and all!

And buckets. And possibly horses. Now this sprawling saga has been immortalized on dead trees with notes from author Andrew Hussie explaining what the hell he was thinking as he brought this monster to life. A must-have for Homestuck fans who want to re-experience the saga or for new readers looking for a gateway to enter this rich universe. A young man stands in his bedroom. It just so happens that he's about to embark on an adventure involving birthday cakes, magic chests, hammers, arms (detachable and otherwise), harlequins, imps, eccentric architecture, movable home furnishings, bunnies, and a video game that will destroy the world.

**embryo development gizmo: HCI and User-Experience Design** Aaron Marcus, 2015-12-03 This book consists of a series of essays which addresses the essentials of the development processes in user-experience design (UX design) planning, research, analysis, evaluation, training and implementation, and deals with the essential components (metaphors, mental models, navigation, and appearance) of user-interfaces and user-experiences during the period of 2002-2007. These essays grew from the authors own column entitled 'Fast Forward' which appeared in Interaction Magazine - the flagship publication of the ACM Special Interest Group on Human-Computing Interaction (SIGCHI). Written in such a way as to ensure longevity, these essays have not been edited or updated, however a short Postscripts has been added to provide some comments on each topic from a current perspective. HCI and User-Experience Design provides a fascinating historical review of the professional and research world of UX and HCI during a period of significant growth and development and would be of interest to students, researchers, and designers who are interested in recent developments within the field.

of Philosophy Kenneth D Alpern, Kenneth D. Alpern, 1992 This timely anthology helps students examine the normative and conceptual issues raised by recent innovations in human reproduction, including in vitro fertilization, embryo transfer, and surrogate motherhood. Broad-based and interdisciplinary, it gathers together essays of remarkable depth and philosophical sophistication by legal scholars, health care professionals, scientists, and theologians as well as philosophers, paying particular attention to women's perspectives and to issues that concern women. Organized around issues rather than techniques and featuring unusually clear introductions to current ethical and legal debates, the text sets the conceptual framework for addressing issues of prudence, morality, and public policy while providing the broadest possible context for the readings and teasing out the connections among them. Designed for a wide range of courses and for students at many levels, the anthology provides both a firm grounding in the basics--the biology of human reproduction, the specific procedures involved in various reproductive techniques, and the psychology of infertility--and a broad range of readings that provide the depth for more advanced thinking. Other unique features are a section on professional responsibilities that will appeal to more scientifically oriented students, a detailed study of the Baby M case that raises profound questions about the legal treatment of reproduction, and an annotated reading list that guides students past today's welter of popular ephemera to many important but lesser-known sources.

**embryo development gizmo:** Scientific and Medical Aspects of Human Reproductive Cloning National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, 2002-06-17 Human reproductive cloning is an assisted reproductive technology that would be carried out with the goal of creating a newborn genetically identical to another human being. It is currently the subject of much debate around the world, involving a variety of ethical, religious, societal, scientific, and medical issues. Scientific and Medical Aspects of Human Reproductive Cloning considers the scientific and medical sides of this issue, plus ethical issues that pertain to human-subjects research. Based on experience with reproductive cloning in animals, the report concludes that human reproductive cloning would be dangerous for the woman, fetus, and newborn, and is likely to fail. The study panel did not address the issue of whether human reproductive cloning, even if it were found to be medically safe, would be acceptable to individuals or society.

**embryo development gizmo: The Lacanian Review 6** Jacques-Alain Miller, Marie-Hélène Brousse, Cyrus Saint Amand Poliakoff, 2018-11 The Lacanian Review (TLR) is a semiannual English-language journal of psychoanalysis, with bilingual (French - English) presentations of texts by Jacques Lacan and Jacques-Alain Miller. TLR publishes writing from prominent international figures of the Lacanian Orientation, featuring new theoretical developments in psychoanalysis, testimonies of the pass, dialogues with other discourses, and articles on contemporary culture, politics, art and science. Each issue explores a theme intersecting the symptoms of our era and emerging work in the New Lacanian School (NLS) and the World Association of Psychoanalysis (WAP). In issue 6 of The Lacanian Review (TLR), there is not a moment to lose. The acceleration of culture and the vertiginous pressure of the drive seem to collapse the instant to see, the time to understand and the moment to conclude. The urgent subject of the now cannot catch up to rapid cycles of political upheaval and social media streams turned into torrents of data. Production overflows consumption in a tidal wave of imaginary cacophony. How does psychoanalysis today respond to urgent times? For its 6th issue, The Lacanian Review (TLR) tasks the signifier, Urgent!, to orient the work of the New Lacanian School (NLS) in examining the urgent cases that occupy our clinic in preparation for the 2019 NLS Congress in Tel Aviv: ¡URGENT! Tracing the edge of the latest Lacan, Bernard Seynhaeve (President of the NLS) curated a series of newly established texts by Jacques Lacan and Jacques-Alain Miller, translated by Russell Grigg, appearing in the first ever bilingual featured section of TLR. Four lessons from the seminars of Jacques-Alain Miller frame this issue. TLR 6 draws heavily from the work of the current Analysts of the School to explore four new fundamental concepts of psychoanalysis: Pass, Real Unconscious, Urgent Cases, and Satisfaction. Interviews with Angelina Harari (President of the WAP), Ricardo Seldes (Director of Pausa), and Lee Edelman (Professor of English Literature at Tufts University) elaborate fundamental concepts across the work of the School One, the clinic of applied analysis, and literary theory in dialogue with psychoanalysis. A groundbreaking orientation text by Éric Laurent from the 2018 Congress of the World Association of Psychoanalysis (WAP) will be published for the first time in English, along with clinical cases exploring transference and psychosis. And finally, approaching the problem of temporality in psychoanalysis, this issue spans Freudian time-management to the logic of the cut in the Lacanian Orientation. TLR is published by the New Lacanian School ([amp-nls.org](http://amp-nls.org)) and distributed by the Lacanian Compass Bookshop ([lacaniancompass.com](http://lacaniancompass.com)) and Eurl Huysmans ([ecf-echoppe.com](http://ecf-echoppe.com)).

**embryo development gizmo: The Merovingian Mythos and the Mystery of Rennes-Le-Chateau** Tracy R. Twyman, 2004 Do five mountains in Southern France contain the greatest treasure of human history? What exactly was the artifact known as the Holy Grail? Was civilization created by beings that were greater than human? Was there once a primeval language given to us by the gods? Does the so-called Grail bloodline descend not just from Jesus, but from the biblical Cain? What is it that makes the Grail bloodline special, and gives the Grail kings a divine right to rule? What is the nature of the ancient conflict that has shaped thousands of years of human history? These questions and more are addressed in Tracy R. Twyman's long awaited book The Merovingian Mythos and the Mystery of Rennes-le-Chateau. Ms. Twyman has been a journalist and occult researcher for more than ten years. She has pursued the Grail mystery in her magazine, Dagobert's Revenge, for more than seven years. Now within the pages of this revolutionary work, Twyman reveals the shocking results of this exhaustive research. After reading this volume, you will never look at history or mythology the same way again.

**embryo development gizmo: Media Environments** Barry Vacker, 2014-09-10 Media Environments is based on a simple concept: combine movies with texts to critique media and society in the 21st century. Using film as a gateway to critical readings, students learn to think creatively and critically about media, society, technology, and popular culture. Rather than examine the media as separate industries or technologies, Media Environments explores the media in their totality and provides models and theories for interrogating many universal themes that span media and global culture. Using films such as The Hunger Games, Fight Club and WALL-E as lead-ins, students are introduced to the works of well-known thinkers and writers such as Jean Baudrillard, Naomi Wolf, Neil Postman, Rebecca MacKinnon, Neil deGrasse Tyson, Julian Assange, Kalle Lasn, Stephen Hawking, and many others. Chapter topics include: memes networks spectacle hyperreality news science ecology capitalism counterculture social media celebrity system total surveillance Internet freedom apocalypse culture media futures The wide range of films, topics, and readings permits professors to tailor the models and theories to fit with their personal interests and expertise in teaching Media and Society or other media-related courses. With its intellectual rigor and thematic diversity, Media Environments is ideal for departments thinking about adopting a single text for their media studies courses. This anthology makes media criticism exciting, engaging, and enlightening. Barry Vacker teaches media and cultural studies at Temple University (Philadelphia), where he is an associate professor in the School of Media and Communication. Vacker has taught media studies courses for 20 years and authored many articles and books on art, media, culture, and technology. His most recent articles explore the meanings of Facebook, the Hubble Space Telescope, Fight Club, and The Walking Dead. His most recent book, The End of the World Again, critiques apocalyptic movies, science, and culture. He is the Founder of the Center for Media and Destiny, a 501c3 non-profit dedicated to exploring the big futures involving media and human destiny. He also directed the documentary film, Space Times Square, which received the international award for Outstanding Praxis in Media Ecology from the Media Ecology Association in 2010. Vacker earned his Ph.D. from The University of Texas at Austin. For Barry s full bio, go to: <http://mediaanddestiny.org/barry-vacker/>
